

PRODUCT UPDATE INFORMATION

ORION EX V2 Conventional Fire Detection & Extinguishing Panel

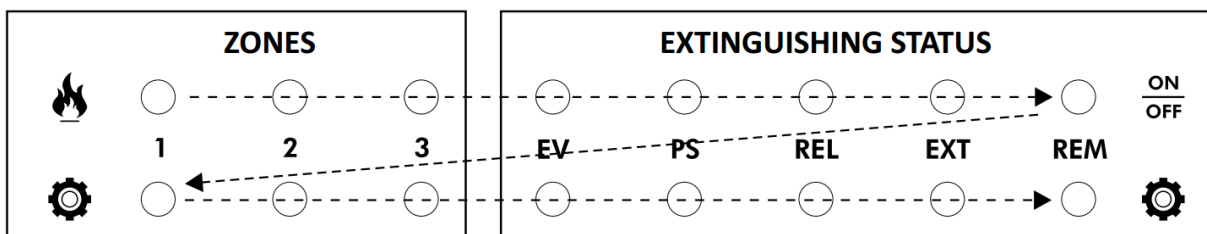

Consistent with the continuous improvement mindset of Global Fire Equipment, ORION EX has been submitted to a major software update that increases its flexibility to cope with European and Non-European requirements. Since the changes are significant from an R&D point of view, panel and related equipment exhibit suffix **V2** for quick identification.

Furthermore, a new communication protocol between panel and peripheral equipment enabled the development of a fully functional repeater, relay and monitored sounder output cards. With higher intelligence, the panel automatically recognizes which modules are connected to DATA & MPX connectors via a type ID. However, this development makes the new peripherals only compatible with **ORION EX V2**.

Newly released peripherals are the following:

- **ORION MINI-REP V2**
- **GFE-MPX-SNDR V2**
- **GFE-MPX-REL V2**

For a quick compatibility assessment, **ORION EX V2** panels can be easily identified during Reset routine as all status LED indicators are activated in sequence with the pattern indicated below:

Please refer to our website for documentation related with mentioned products.
