

GFE-GSM-INT Notification

Global Fire Equipment would like to inform our customer base that GFE-GSM-INT module will become unavailable until further notice.

The reason behind this communication is the fact that GSM wireless module MG323-B is no longer being manufactured and until today we didn't succeed in finding a viable alternative.

We will continue to search for an alternative, as we think it has differentiated features in comparison to other alternatives, namely sending panel Event Log via SMS.

Until we find a solution, our suggestion is to use a third party GSM/Dialer communicator for general Fire/Fault notification, together with our web enabled interface GFE-TCP-WEB that enables supervision of GFE addressable systems via [web-browser](#).

GFE-GSM-INT will continue to be supplied while stock lasts.

For additional clarification please use our website [contact form](#) or local distributor.
